

Advanced Python Fresher Interview Questions & Solutions

This handbook contains additional Python logic building questions commonly asked in fresher interviews with clean solutions.

Q1. Find Duplicate Elements in List

```
arr = [1,2,3,2,4,5,1]
dup = []
for i in arr:
    if arr.count(i) > 1 and i not in dup:
        dup.append(i)
print(dup)
```

Q2. Check Leap Year

```
year = int(input("Enter year: "))
if (year % 4 == 0 and year % 100 != 0) or year % 400 == 0:
    print("Leap Year")
else:
    print("Not Leap Year")
```

Q3. Find Maximum Element in List

```
arr = [12, 45, 7, 89, 34]
max_num = arr[0]
for i in arr:
    if i > max_num:
        max_num = i
print("Maximum:", max_num)
```

Q4. Second Largest Number

```
arr = [10, 20, 4, 45, 99]
arr.sort()
print("Second Largest:", arr[-2])
```

Q5. Count Digits in Number

```
num = int(input("Enter number: "))
count = 0
while num > 0:
    num = num // 10
    count += 1
print("Total Digits:", count)
```

Q6. Sum of Digits

```
num = int(input())

total = 0

while num > 0:
    digit = num % 10
    total += digit
    num = num // 10

print(total)
```

Q7. Check Perfect Number

```
num = int(input())

sum = 0

for i in range(1, num):
    if num % i == 0:
        sum += i

if sum == num:
    print("Perfect Number")
else:
    print("Not Perfect")
```

Q8. Find Common Elements Between Two Lists

```
a = [1,2,3,4]
b = [3,4,5,6]

common = []

for i in a:
    if i in b:
        common.append(i)

print(common)
```

Q9. Remove Spaces from String

```
text = input("Enter string: ")

result = ""

for ch in text:
    if ch != " ":
        result += ch

print(result)
```

Q10. Check String Palindrome

```
text = input("Enter string: ")

if text == text[::-1]:
    print("Palindrome")
else:
    print("Not Palindrome")
```

Q11. Frequency of Characters

```

text = input()

freq = {}

for ch in text:
    if ch in freq:
        freq[ch] += 1
    else:
        freq[ch] = 1

print(freq)

```

Q12. Merge Two Lists

```

a = [1,2,3]
b = [4,5,6]

c = a + b

print(c)

```

Q13. Find Smallest Element

```

arr = [12, 5, 7, 1, 20]

small = arr[0]

for i in arr:
    if i < small:
        small = i

print("Smallest:", small)

```

Q14. Generate Multiplication Table

```

num = int(input())

for i in range(1, 11):
    print(num, "x", i, "=", num*i)

```

Q15. Count Uppercase and Lowercase

```

text = input()

upper = 0
lower = 0

for ch in text:
    if ch.isupper():
        upper += 1
    elif ch.islower():
        lower += 1

print("Uppercase:", upper)
print("Lowercase:", lower)

```

Q16. Find Missing Number in List

```

arr = [1,2,3,5]

n = 5

total = n * (n + 1) // 2

```

```
print("Missing Number:", total - sum(arr))
```

Q17. Check Number Positive or Negative

```
num = int(input())  
if num > 0:  
    print("Positive")  
elif num < 0:  
    print("Negative")  
else:  
    print("Zero")
```

Q18. Reverse List

```
arr = [1,2,3,4,5]  
rev = []  
for i in arr:  
    rev = [i] + rev  
print(rev)
```

Q19. Find Even Numbers in List

```
arr = [1,2,3,4,5,6]  
for i in arr:  
    if i % 2 == 0:  
        print(i)
```

Q20. Simple Employee Class

```
class Employee:  
    def __init__(self, name, salary):  
        self.name = name  
        self.salary = salary  
    def display(self):  
        print(self.name, self.salary)  
e1 = Employee("Rahul", 50000)  
e1.display()
```
